**Valve & Pipe Fittings for Water System**

**WEIZIDOM GROUP**

# WEIZIDOM GROUP

## Enterprise Social Responsibility

WEIZIDOM are not only concerned about products, services and solutions.

**WEIZIDOM promise to implement sustainable development and benefit society with energy-saving and environmental protection.**

**Our Purpose:** People-Oriented, Hard Work, Never forget the original intention, Innovation and forge ahead

**Our Mission:** To be a high-quality supplier of fluid control systems and plan maker; To contribute our wisdom and strength to the development of the cutting-edge technology of fluid control systems.

**Our Vision:** Explore the internal innovation spirit and creativity, pursuit, innovation and continuous improvement. Use wisdom, foresight and hard work to make "WEIZIDOM" a world-renowned brand; Make the group company grow into a respectable "Four Satisfaction" enterprise:

**Customer Satisfaction:** Use high-quality products and refined services to add value to customers;

**Employee Satisfaction:** People-oriented, build a platform for all employees to realize their dreams, everyone is the CEO;

**Partner Satisfaction:** Mutual promotion, improve, mutual benefit and win-win;

**Shareholder Satisfaction:** Enable the company to develop and grow, and return profits.

**Our Values:** Create differentiated value-added services for customers, let everyone in the company has a sense of accomplishment.

# WEIZIDOM GROUP

## Development History

### 2010

WESDOM was established

In December 2010, WESDOM was registered with a registered capital of 5 million yuan;

June 2013, WESDOM passed ISO and other international certifications;

### 2015

WESDOM established the first overseas branch

In June 2014, TIANJIN WESDOM VALVE MANUFACTURING CO., LTD. was established in Tianjin, where the production of butterfly valves is concentrated;

### 2016

WESDOM products are exported to overseas regions and markets

In July 2015, the first overseas branch company WEISIDUN MATERIAL SOLUTION COMPANY was established in the beautiful African continent – Tanzania, and WESDOM began to expand into the international market;

### 2018

Zambia branch was established, and the group company expanded its measurement products series

### 2019

WESDOM launched a series of plastic materials

### 2020

WESDOM sales exceeded 100 million yuan

### 2021

Kenya branch is established, WESDOM products occupy the African market

In January 2018, the second exclusive import and export company was established – HENAN WESDOM

FLOW CONTROL CO., LTD. In August of the same year, the second overseas branch company – WESDOM VALVES AND FITTINGS COMPANY LIMITED was established in Zambia, Africa;

In 2018, the series of measurement products (water meters, flow meters) were expanded, and the supply chain system was further enriched and improved;

In 2019, a series of plastic material products were launched; the company's valves and pipe fittings passed the CE certification; WESDOM overall sales performance exceeded 90 million in the same year;

In 2020, under the influence of the unfavorable factors of the domestic and foreign epidemic situation, the company has achieved the goal of breaking 100 million yuan in addition to the continuous growth of sales.

In April 2021, the Kenya branch WESDOM VALVES AND FITTINGS(K) CO LIMITED was established and operated well, its products occupy the African market successfully.

To be continued...

# WEIZIDOM GROUP

## Company Introduction

WESDOM Group specializes in pipeline fluid systems: R&D, production and sales of valves, pipe fittings, water meters, flow meters, etc.

The products cover cast iron, cast steel, stainless steel, copper, plastics and other materials, which are widely used in hydropower stations, heat, buildings, Water supply and drainage, petroleum, chemical industry, electric power, medical and other fields.

In recent years, WESDOM Group has actively embraced the era of Internet of Everything, committed to IoT terminal control and artificial intelligence design, big data mining and development, and promoted smart hardware to move towards big data center and wisdom with excellent market foresight and technological innovation. The smart cities, smart heating, smart water and other fields are in progress.

In the early stage, the Internet of Things smart valves and smart water meters were developed to promote and apply smart control systems such as municipal heating and municipal water supply.

In terms of quality control, we have strict control procedures. From the raw materials entering the factory to the final product leaving the factory, after 24 quality inspection passes, each pass must ensure

that the product quality is 100% qualified before it can flow into the next process, thus ensuring that the qualified rate of the finished products.

WESDOM products can well meet the Chinese standard like GB, JB, HB; American standard like API, ASME, AWWA; British and EU standards like BS, EN, ISO; German standard DIN; Japanese standard JIS; Russian standard GOST and other standards.

## Application Field

### Power Generation

- Water and electricity
- Flue gas desulfurization system
- Flue gas desulfurization system
- Cooling water system
- Steam System
- Waste incineration power generation
- Renewable energy

### Steel

Water engineering valves and air valves are used to control the gases in the steel production

### Mining

- Acid leaching solvent extraction
- Mud transmission
- Cooling System

### Chemical Industry

- Chemical production
- Distribution system
- Surface treatment
- Biofuels

### Boats and Ships

- Cargo loading
- Dredging system
- Cooling water system
- Inert gas
- Hull valve
- Ballast system
- Compressed gas

### Building

- Water supply and drainage
- Heating ventilation and air conditioning

## Service Project

1. PROJECT NAME: ZANZIBAR URBAN WATER AND SANITATION PROJECT (ZUWSP) PACKAGE
2. Construction of Scheme Works Infrastructure for Water Supply, for Zanzibar, Tanzania.

- **01 Butterfly Valve Series**
- **17 Resilient Soft Seated Gate Valve Series**
- **35 Hydraulic Control Valve Series**
- **45 Check valve series**
- **55 Air Release Valve Series**
- **59 Strainers & Pipe Fittings**

## ➤ **Butterfly Valve Series**

- Wafer butterfly valve
- Lug butterfly valve
- Middle line to clamp butterfly valve
- Flange butterfly valve
- Double flange butterfly valve
- Double eccentric flange butterfly valve
- U type butterfly valve
- Double flange electric soft seal butterfly valve
- Anti-knot dew butterfly valve
- Double flange electric soft seal butterfly valve

## Butterfly valve series

### SAFETY

The reliability of top seal has been enhanced by using the double sealing of "O" ring and "V" rings. The "O" ring is located between the stem and the body to ensure the first sealing performance. The second seal is combined by V-shaped seal rings which achieve sealing requirements by the extrusion of the gland.

There is yoke between the body and operator. Once the leakage occurs in the top, the valves can be repaired without taking apart the gear-boxes or actuators. In this case, we just need to tighten the bolts of the gland, or remove the gland and add new "V" ring, the problem can be solved.

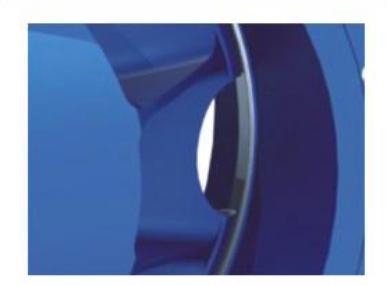

After the valves pass the test, the cylindrical pin is punched between the yoke and top flange to fix the position. This ensures the stability of the quality.

The disc is fixed with taper pins, the taper pins were fixed on the disc with shim and bolts. This effectively prevents the taper pin from loosening, and ensures that the connection of the disc and the stem was more stable.

The body is sealed by stainless steel body seat and rubber sealing ring of the disc. The high hardness and good resistance of attrition of the stainless steel seat ensure the long service life of the valves.

## Butterfly valve series

### Environmental-friendly

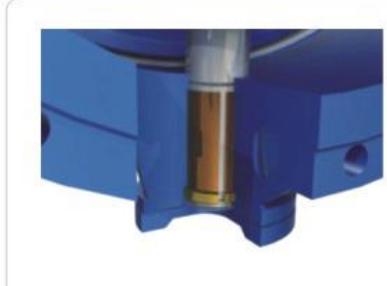

The rubber sealing ring of the disc is fixed in the groove by two sets of bolts and one retainer ring. The rubber ring is extruded and deformed by adjusting the first set of the bolts to form the seal with the body seat, and the second set of bolts were used to maintain the deformation of the sealing ring. In the use, if there was the leakage in the body seat, the two sets of bolts can be adjusted to seal.

There are four connecting devices around the body, the body feet and hoisting rings can be mounted on these devices. it's easy to install the valves vertically or horizontally by changing the installation position of the body feet and the hoisting rings.

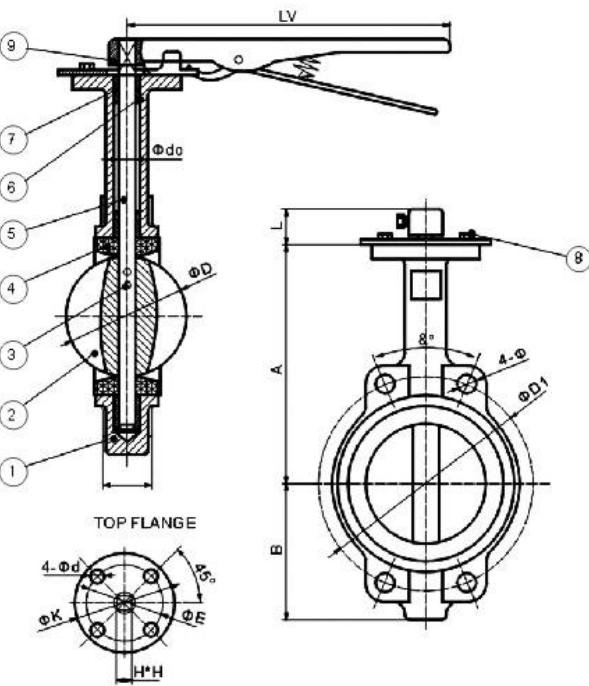

There are two "O" rings in the bottom seal, one is between the body and stem, an other is between the body and bottom seal. The sealing performance is improved with double protection.

## Wafer butterfly valve

DN50–DN1200 (DIN/BS)

### Application standards

- Design standard: EN 593/API 609
- Working temperature: NBR 0–70°C, EPDM 0–80°C
- Face to face: According to EN558–1 series 20
- Working pressure: PN10–16
- Flange drilling: According to EN1092 PN10/16
- SUitable medium: Water
- Size scope: DN40–DN 1200(DIN/BS)
- Coating: Epoxy coating with thickness ≥250 μ m

### Parts list

No.	Part Name	Material
1	Body	CastIron/Ductile Iron
2	Disc	Ductile Iron / SS 304
3	Pin	Stainless steel
4	Seat	EPDM
5	Stem	2Cr13
6	Bushing	P.T.F.E.
7	O-ring	NBR
8	Indicator	Carbon steel
9	Lever / Gear-box	malleable iron / Ductile iron / Aluminum

#### Lug butterfly valve

#### Middle line to clamp butterfly valve

#### Product Standard:

Desing: BS 5155, API 609, BS EN593  
 Flanges: BS 4504, DIN 2501, ASME 16.1, JIS 5K/10K  
 Face to face: DIN 3202, BS EN558-1, ISO 5752,  
 ASME B16.1  
 Top Flange: ISO 5211  
 Test: BS EN12266, API 598

#### Technical Specification:

Size: DN50~DN600(2"-24")  
 Pressure: PN10/16  
 Work Temperature: -5°C~85°C  
 Seat Test: 1.1×PN  
 Shell Test: 1.5×PN  
 Medium: Clean Water, Sewage

#### Features:

- Bidirectional seal, easy to operate and install.
- Streamlined disc with low head loss.
- Vulcanized rubber seat, Low torque.
- Valve can be install on pipeline directly without extra flanges gasket.

#### Material Specification:

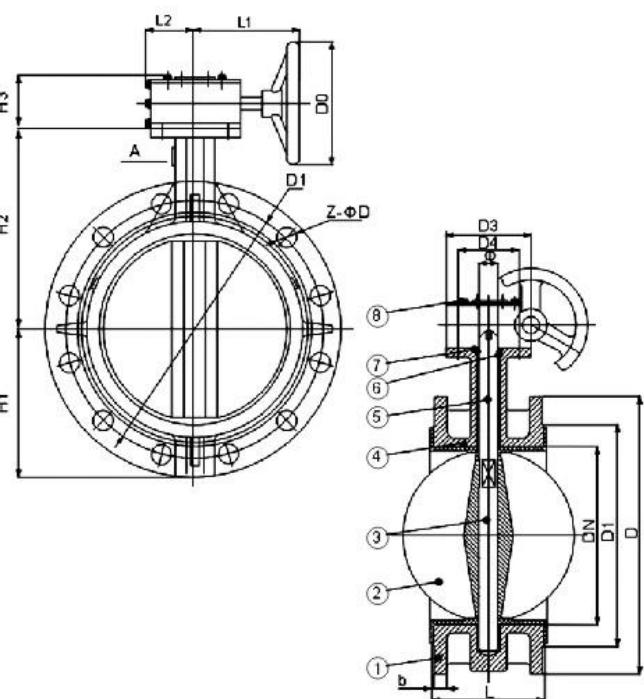

No.	Part Name	Material
1	Body	EN GJS 500-7
2	Disc	DI/SS/Bronze
3	Stem	AISI 410/416
4	Seat	NBR/EPDM

## Flange butterfly valve

## Double flange butterfly valve

## Butterfly Valve Series

### Product Standard:

Design: BS 5155, API 609, BS EN593  
 Flanges: BS 4504, DIN 2501, ASME 16.1, JIS 5K/10K  
 Face to face: DIN 3202, BS EN558-1, ISO 5752,  
 ASME B16.1  
 Top Flange: ISO 5211  
 Test: BS EN12266, API 598

### Technical Specification:

Size: DN50~DN1000(2"-40")  
 Pressure: PN10/16  
 Work Temperature: -5°C~85°C  
 Seat Test: 1.1 × PN  
 Shell Test: 1.5 × PN  
 Medium: Clean Water, Sewage

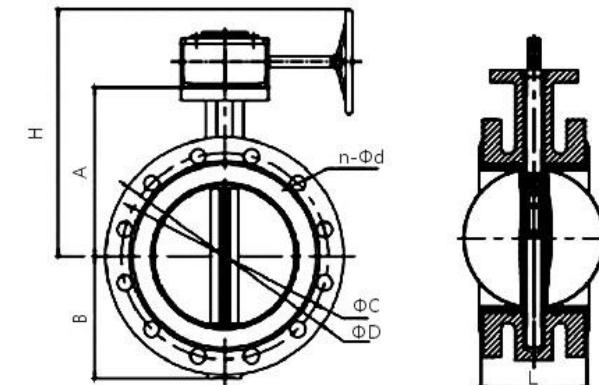

### Features:

- Bidirectional seal, easy to operate and install.
- Streamlined disc with low head loss.
- Vulcanized rubber seat, Low torque.
- Valve can be install on pipeline directly without extra flanges gasket.

### Material Specification:

No.	Part Name	Material
1	Body	EN GJS 500-7
2	Disc	DI/SS/Bronze
3	Stem	AISI 410/416
4	Seat	NBR/EPDM
5	O Rings	NBR
6	Pin	C.S
7	Gear box	Cast Iron

## Double eccentric flange butterfly valve

DN100-DN1800 (DIN/BS)

### Applictaion Standards

- Design standard: GB12238, BS 5155, EN593 and API 609;
- Face to face: According to EN558-1 series 13, EN558-1 series 14, AWWA C504;
- Flange drilling: According to EN1092 PN10-16;
- Size scope: DN100-DN1800;
- Working pressure: PN10-16;
- Suitable medium: Water;
- Coating Epoxy coating with thickness  $\geq 250\mu\text{m}$ .

## Double eccentric flange butterfly valve

## Butterfly Valve Series

### Parts List

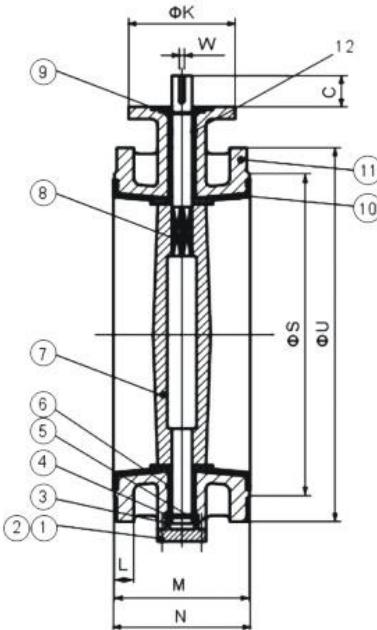

No.	Part name	Material
1	Body	Ductile iron+2Cr13
2	Bottom cover	A3 steel
3	Bolt	304
4	"O" ring	NBR
5	Split collar	HPb59-1
6	Bushing	A3 Steel
7	"O" ring	NBR
8	Lower stem	2Cr13
9	Upper stem	2Cr13
10	Taper pins with internal thread	2Cr13
11	Washer	2Cr13
12	Bolt	201
13	Disc	Ductile iron
14	Disc clamp	Ductile iron
15	Bolt, Spring washer, Washer	304, 304, 65Mn, 304
16	Bolt	201
17	Seal ring	NBR/EPDM
18	Retaining ring	PTFE
19	"V" ring	NBR
20	Washer	PTFE
21	Cover	Ductile iron
22	Inspection port	Ductile iron
23	Bolt, Spring washer, Washer, Nut	304, 65Mn, 304, 316
24	Bolt, Washer	304, 304
25	Bolt, Spring washer, Washer	304, 65Mn, 304
26	Cylindrical Pin	2Cr13
27	Flat Pin	45# Steel
28	Flat Pin	45# Steel
29	Actuator	IP 65
30	Bolt, wasger	304, 304
31	Liftring	Ductile iron
32	Foot	Ductile iron

## U type butterfly valve

DN50-DN1200

## U type butterfly valve

## Butterfly Valve Series

### Application standards

- Design code: EN593
- Inspection & Test: EN12266-1
- End standard: BS 4504 Pn16
- Face to Face: EN558-1
- Size scope: 50–1200mm
- Nominal Pressure: 1.6MPa
- Shell test(water): 2.4MPa
- Sealing test(water): 1.76MPa
- Working temperature: 10–120°C

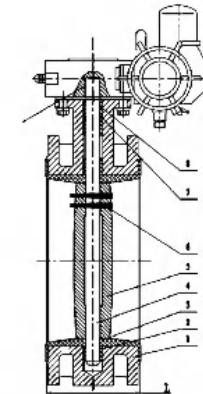

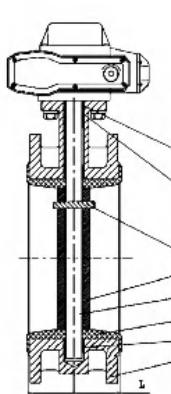

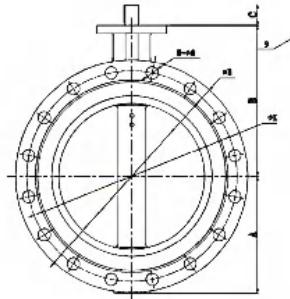

### Parts list

No.	Part Name	Material
1	Hex. Bolt	Carbon steel
2	Spring gasket	Spring steel
3	O ring	EPDM
4	Gasket	Stainless steel
5	End plate	Ductile Iron
6	Bushing	PTFE
7	Disc	Ductile Iron
8	Shaft	SS 410
9	Seat	EPDM
10	Body	Ductile Iron
11	O ring	EPDM

### Double flange electric soft seal butterfly valve

Lengthen bar butterfly valve products lengthen the length of the valve stem, some underground, pipeline indoor, many medium special places to provide convenient switch design of a butterfly valve, to provide convenience for valve control. Reliable seal, long service life, widely used in water plant, power plant, steel mill, paper making, chemical industry, food and other systems supply and drainage, as a regulation and cut-off use.

The flange plates at both ends of the extension rod are connected to the upper flange of the valve and the turbine head respectively, which is easy to remove.

### Butterfly Valve Series

#### Main parts and materials

No.	Part name	Material
1	Body	Cast Iron, Ductile Iron, WCB, Stainless Steel, Bronze
2	Bushing	PTFE
3	Seat	EPDM, NBR
4	Stem	SS416, SS304, SS316
5	Disc	Ductile Iron, WCB, 304, 316, C95800, 2501
6	Pin	416, 304, 316
7	Bushing	PTFE
8	O-ring	NBR

#### Valve design

技术规范 Technical specification	
Valve design	BS 5155, API 609, MSS SP-67
Face to Face	BS EN558-1, API 609, MSS SP-67, DIN 3202
Pressure test	BS 6755/EN12266, API 598
Flange Drilling	BS4504 PN10/PN16, ANSI B16.1 Class125 DIN2501 PN10/PN16
Top Flange	ISO5211

## Resilient Soft Seated Gate Valve Series

- NRS resilient soft seated flange gate valve
- RS resilient soft seated flange gate valve
- NRS resilient soft seated (PVC/PE PIPE) socket gate valve
- NRS resilient soft seated (DI PIPE) socket gate valves
- Anti-theft NRS resilient soft seated gate valve

- Electric actuated NRS resilient soft seated gate valve
- Gate valves with extension spindle
- Heavy type NRS resilient soft seated flange gate valve
- BS Electric soft-seal gate valve

### Double flange electric soft seal butterfly valve

#### SAFETY

#### Body

The body is made of ductile iron by precision casting molding. It was designed by 3D software, with finite element analysis for the structure. The safety coefficient is over 2.5. The bottom of the channel is without groove, no accumulation of rubbish, and with small flow resistance.

#### Stem

The stem is made of stainless steel by rolling. Integral type, avoiding the use of the brass half rings to reduce stem diameter. the smooth modified ladder type screw is extruded. Global mirror polish, it fits the O rings well, to ensure that the rotation is flexible and labor saving.

#### Wedge

The frame of the wedge is made of ductile iron by the percoated sand molding, the wedge is covered by EPDM totally. Double seal design, each seal line can work independently.

#### Bonnet

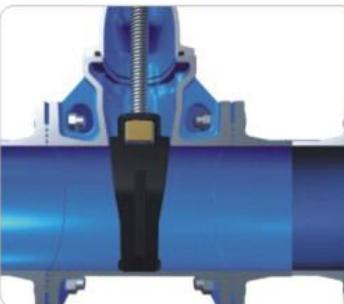

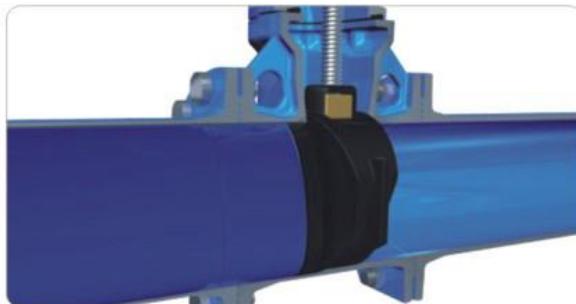

The grade 8.8 bolts connect the bonnet and the body, the bolts were covered by hot-melt glue which protect the bolts for anti-corrosion. The gasket between the bonnet and body is made of EPDM. The valve cover is with a retaining groove, make sure that the rubber gasket won't be extruded out under high water pressure.

## Resilient soft seated gate valve series

### Environmental-friendly

The inside and outside surface of the valve is coated with sanitary epoxy powder by static electricity, the average thickness is above 250 µm. The adhesion of the coating is strong; it won't be destroyed under the impact force test of 3J. Internal parts can meet with the environmental protection demand, and can be used for the potable water, food and pharmaceutical area directly. The electrostatic powder coating process can promise high adhesion force and strong corrosion resistance.

The rubber parts are made of high quality EPDM or NBR, which is in accordance with the drinking water requirements, avoiding the problem of the common rubber which is easy to breed microorganism. The products are not only approved by the national quality standards for drinking water related products, but also reached the UK WRAS standards. The stem nut is forged and rolled from the national standard brass rod (low lead), and no pollution to water.

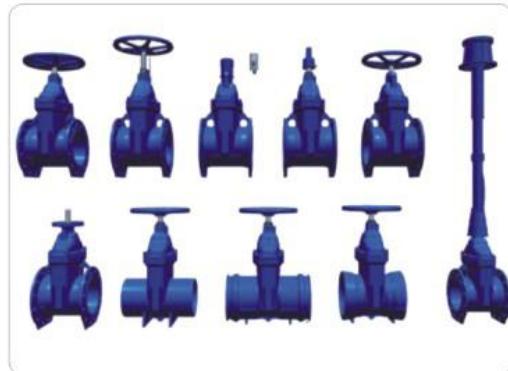

## Resilient soft seated gate valve series

### Convenient

### Convenient installation and operation

We offer various kinds of interface such as flange connection, PVC pipe socket, Ductile iron pipe socket, reducing etc.). The special connection design can be developed as the requests of the customers. The gate valves can be operated by electric actuator, handwheels, square nuts or special key. It's convenient to install the valves in different positions of the pipe lines. Except for the vertical installation, the valves also can be horizontal installation. In some narrow spaces, you can choose the installation way which is convenient for the operation of the valves.

The actual operating torque is only 80% of diameter

The products passed the switch life test of 5000 times

The gate valves can bear the MST of 3\*DN N.M

The valve can be completely closed and reach at 0 leakage with small torque. The actual operating torque is only 80% of diameter, and the gate valves can bear the MST of 3\*DN N.M. The products passed the switch life test of 5000 times. For the valves of bigger diameter, we can offer the labour saving devices, to ensure that all the valves can be opened and closed by one person. The handwheel is strong, with accurate dimensions, it fits well with the valve stem, the shape is in accordance with human mechanics, to ensure easy operation.

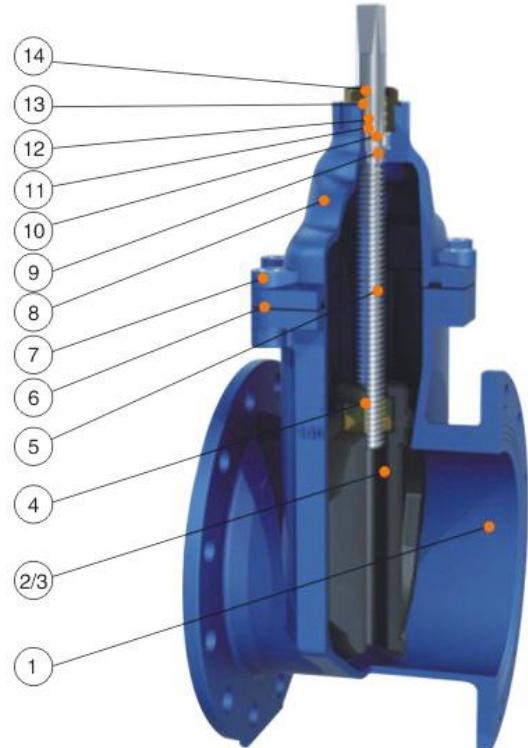

### Convenient maintenance

The seal ring can be replaced without cutting off the water, it's easier for the maintenance and reduce the maintenance time as much as possible. The friction between the brass bushing and the "O" type seal ring is small, and the seal can work for long time. The Max. Operate torque is under the control.

## NRS resilient soft seated flange gate valve

DN40-DN1000 (DIN/BS), 2"-12"(ANSI)

### Application standards

Design standard	EN1171:2002
Face to face	According to EN558-1 series 14(DIN F4), series 15 (DIN F5), series 3 (BS5163) and ASME B16.10
Flange drilling	According to EN1092 PN 10-16, ASME B16.1-16.5
Size scope	DN40-DN1000(DIN/BS), 2"-12"(ANSI)
Working temperature	NBR 0-70°C, EPDM 0-80°C
Working pressure	PN10-16, Class 125-150
Suitable medium	Water
Coating	Epoxy coating with thickness ≥ 250μm

### Parts list

No.	Part Name	Material
1	Body	Ductile Iron
2	Wedge	Ductile Iron with EPDM / NBR
3	Guide collar	Nylon
4	Wedge nut	Brass
5	Stem	2Cr13
6	Gasket	NBR / EPDM
7	Bonnet bolt	Galvanized Carbon steel / SS304
8	Bonnet	Ductile Iron

## BS Electric soft-seal gate valve

### General Instruction

Multi-turn valve electric actuator, known by the name of Z-type, which is used for opening, closing or adjusting the valves, is an essential actuating device which can be used for remote control, centralized control and self control to the valves, with features of comprehensive function, reliable performance, advanced control system, small volume, light weight, convenient application and maintenance and so on. It can be applicable to the valves, whose open-close parts will move in a straight line, such as gate valve, stop valve, diaphragm valve, anchor gate, water gate valve and so on.

The actuator can be used in the industries like electric power, metallurgy, petroleum, chemical engineering, paper-making, sewage disposal and so on.

There are many types for multi-turn electric actuator: outdoor type, explosion-proof type, integral type, integral-regulation type, integral explosion proof type, integral-regulation explosion proof type and so on. It can be divided into torque type and thrust type according to the connection type.

### Presentation of Model

### Opening Environment and Major Technical Parameters

3.1 Power supply: general: single-phase 220V, three-phase 380V(50Hz), long distance DC24V Special: single-phase 110V, three-phase 415V, 660V, (50Hz,60Hz)

3.2 Operating environment:

3.2.1 Ambient temperature: 20 ~ +60°C (special order 60 ~ +80°C)

3.2.2 Relative humidity: 95% (when 25°C)

3.2.3.1 The outdoor type can be used in the places without inflammable/explosive and corrosive medium;

3.2.3.2 There are two types of explosion-proof products: d I can be applicable to non-excavating working area for coal mine, and d II BT4, which is applicable to the environment with

IIA, IIB grade T1 ~ T4 explosive gas mixture, can be used in the factory.(For details refer to GB3836.1)

3.2.4 Degree of protection: the outdoor type and explosion-proof type is IP 55, IP 65, IP 67.

3.3 Working time: 10 minutes for short time(special order can reach to 15~60 minutes).

3.4 Refer to table 1 for the model and major performance parameter.

Z350	3500	700	80	20:1	18/24	7.5/10	15.6/20.5	330
Z500	5000	700	80	20:1	18/24	10/15	20.5/26.6	350

Note: If user requires, we could provide the products with other rotation speed: 12/18/24/30/36/42/48/60(r/min)

Normally, we provide the products with treble counters. If the number of turns is large, give clear indication of it when placing an order, we can provide the products with quadruple counters.

### 4. Outline and connection dimension

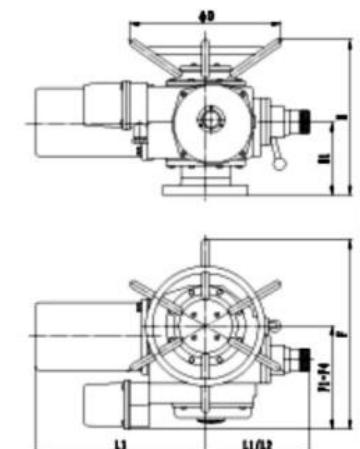

#### 4.1 Outline and outline dimension(referto Figure 1 and Table 2)

Table 2 Outline Dimension

Model	H	H1	L1	L2	L3	F	F1	F2	F3	F4	ΦD
Z5	271	96	158	226	249	158	259	-	310	-	316

Z350/Z500	717	280	399	399	1076	433	417	442	417	542	565

Note: 1) L1 is outdoor type/explosion-proof type; L2 is integral type/integral explosion;

2)F1 is outdoor type; F2 is explosion-proof type; F3 is integral type; F4 is integral explosion-proof type/integral regulation explosion-proof type.

### Structure

Z type electric actuator is consisted of motor, speed reducer, torque controller, motion controller, opening position indicator, manual-electric shifter, hand wheel and electric parts. The conventional type is sealing with ground surfaces; the outdoor type applies the round rabbet and o-seal ring seal; The explosion-proof type has the same sealing structure as the outdoor type, is added by the explosion-proof surface, and applies explosion-proof type connecting box and three phase motor used for the outdoors, anti corrosion, explosion-proof type electric valve of the YBDF series.

### Trouble trouble shooting

No.	Trouble	Cause	Trouble shooting
1	The motor can not start	1.The power line disconnects. 2.control circuit is faulty the motion controller and torque controller break down	1. check the power line 2. remove the fault of motion controller or torque controller.
2	The turning direction Of output axis can not Meet the specification	The phase sequence of power supply has been connected wrongly	Exchange any two power lines.
3	The motor is Overheating	1.the continuous operating time is too Long 2. The motor can not match the electric actuator. 3. one phase conductors disconnects	1. stop running , and make the Motor cool down 2. check the matching situation 3. Check the power line
4	The motor stops when Running	1. the overload torque controller of electric actuator actuates 2. the valve is faulty	1. increase the setting torque 2. Check the valve
5	When the valve is in Place ,the motor can not stop running or the light is Off.	1. the motion controller and torque controller are faulty 2. the motion controller has been adjusted improperly	1. check the motion or torque Controller 2. readjust the motion controller
6	No signal of valve Location in distant place	1. remote-transmitting potentiometer is faulty 2. the set screw for gear of the potentiometer looses	1. check and replace the potentiometer 2. screw down the set screw for gear of the potentiometer

## Hydraulic control valve series

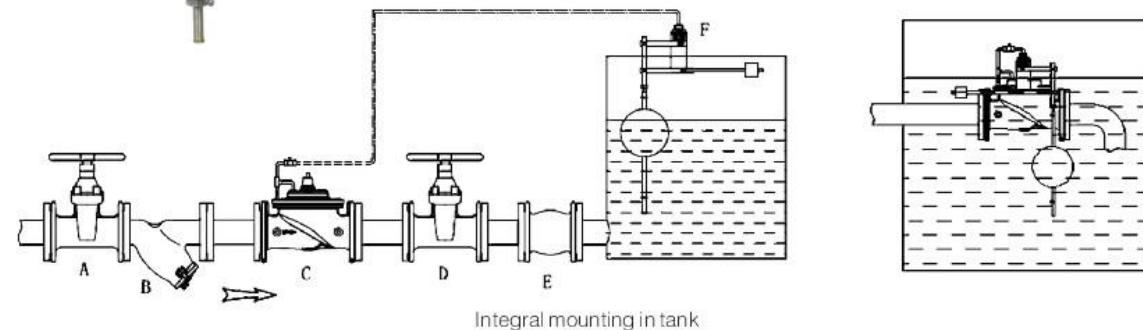

### Float control valve F8010

Float valve is a modulating valve that accurately controls the liquid level in tanks. This valve is designed to open fully when the liquid level reaches a preset low point, and close drip-tight when the level reaches a preset high point. The float pilot is remotely installed inside of reservoir, or integrally installed with main valve for size less than 4 inch.

### Float control valve F8011

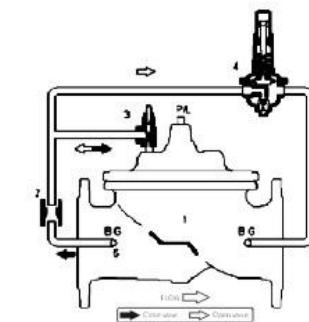

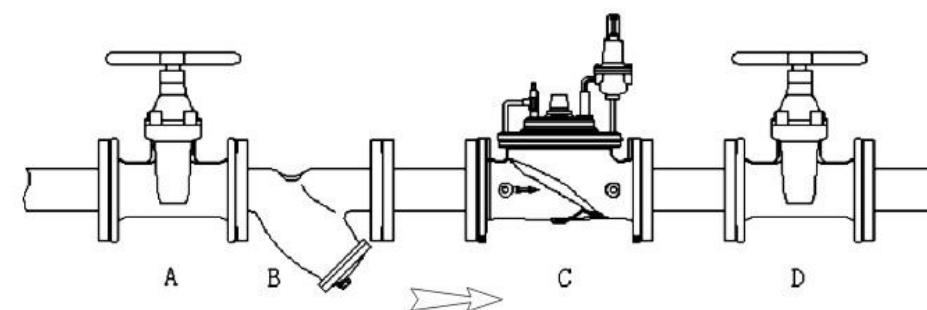

Float valve is a non-modulating valve that accurately controls the liquid level in tanks. This valve is designed to open fully when the liquid level reaches a preset low point, and close drip-tight when the level reaches a preset high point. The float pilot is remotely installed inside of reservoir, or integrally installed with main valve for size less than 4 inch. The high and low point can be adjusted on the spot. The max adjustable distance is 0.5m, if need more, consult factory.

## Hydraulic control valve series

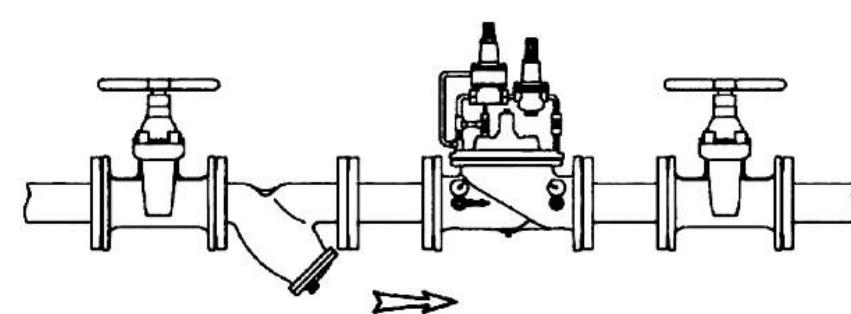

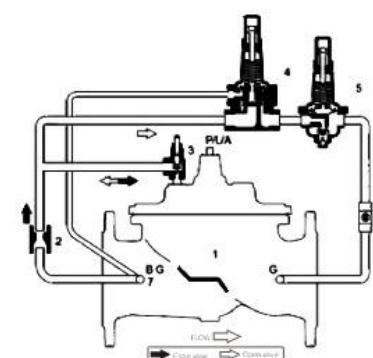

### Pressure reducing valve F8020

Pressure reducing valve automatically reduces a higher inlet pressure to a steady lower downstream pressure, regardless of changing flow rate and/or varying inlet pressure. The valve is an accurate, pilot-operated regulator capable of holding downstream pressure to a pre-determined limit. When downstream pressure exceeds the pressure setting of the control pilot, the main valve and pilot valve close drip-tight.

### Pressure reducing and sustaining valve F8025

Pressure reducing and sustaining valve automatically perform two independent functions. It maintains a constant downstream pressure, regardless of fluctuating demand and sustains the upstream pressure to a pre-determined minimum. The pressure reducing pilot responds to slight variations in downstream pressure and immediately repositions the main valve to maintain the desired downstream pressure. The pressure sustaining pilot is normally held open by the upstream pressure and close when the pressure drop to the set point. The valve usually used in lower elevation pipeline to guarantee prior use of higher elevation area.

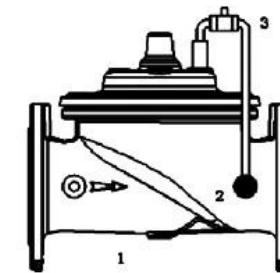

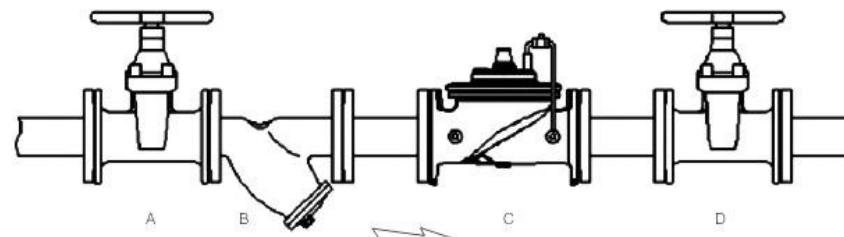

## Hydraulic Control Valve Series

## Hydraulic control valve series

### Check valve F8030

Check valve is a hydraulically operated No-slam check valve. This valve opens when the pressure at the inlet exceeds this discharge pressure. A gradual rate of opening prevents sudden opening surges. When a pressure reversal occurs the higher downstream pressure is applied to the cover chamber through the control tube lines. And the valve closes drip tight. This valve is ideally suited for use where a positive shutoff is required. The rubber disc assures tight sealing. The velocity of Open/shutoff can be controlled by the ball valve on the outlet control tube line.

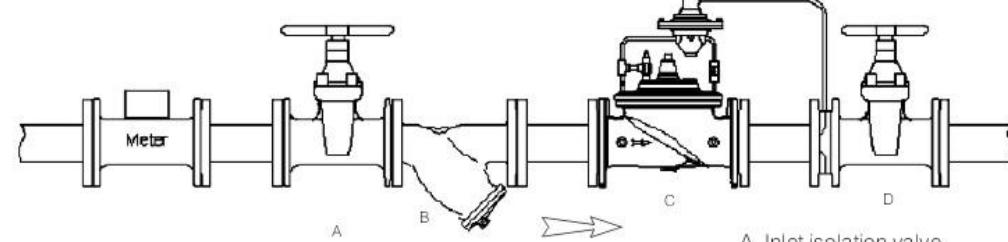

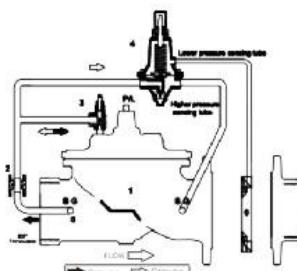

### Flow control valve F8040

Flow control valve prevents excessive flow by limiting flow to a preselected maximum rate, regardless of changing line pressure. It is a hydraulically operated, pilot controlled, diaphragm valve. The pilot control responds to the differential pressure produced across an orifice plate installed downstream of the valve. Accurate control is assured as very small changes in the controlling differential pressure produce immediate corrective action of the main valve. Flow rate adjustments are made by turning an adjusting screw on the pilot control.

The valve includes an orifice plate with a holder that should be installed one to five pipe diameters downstream of the valve. To guarantee accurate control of flow rate, there are several orifice plate with different hole optional for each size, see the additional table for selection of orifice.

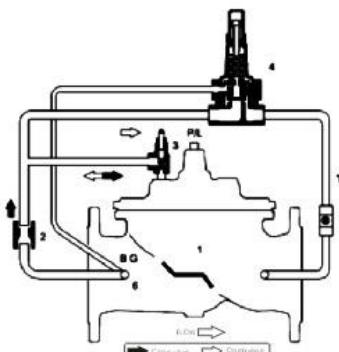

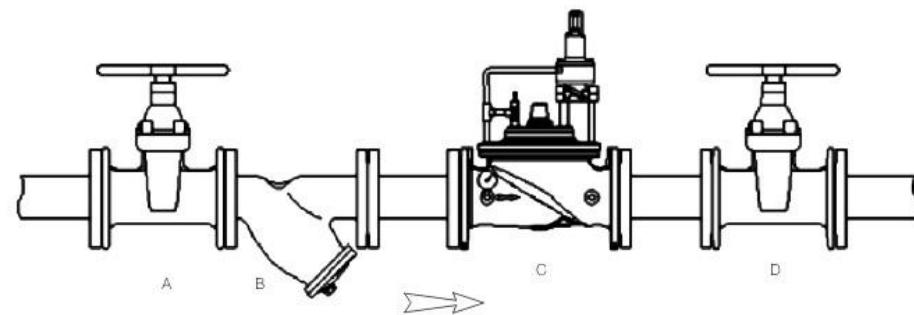

A. Inlet isolation valve

## Hydraulic control valve series

### Pressure sustaining/relief valve F8050

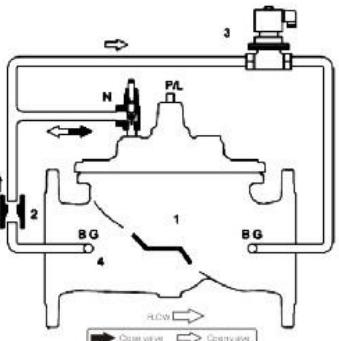

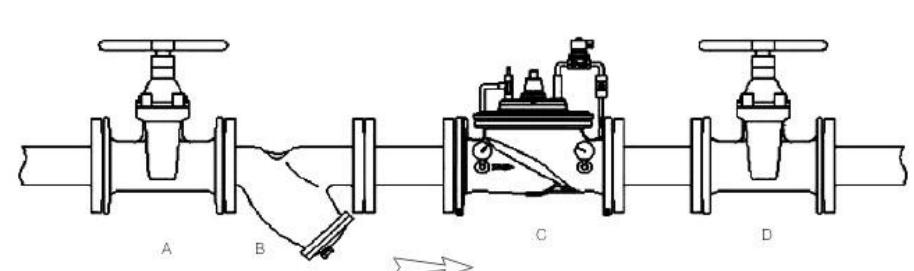

Pressure sustainer/relief valve is a hydraulically operated, pilot-controlled, modulating valve designed to maintain constant upstream pressure with in close limit. This valve can be used for pressure relief, pressure sustaining, and back pressure function in a by-pass system. In operation, the valve is actuated by line pressure through a pilot control system, opening fast to maintain steady line pressure but closing gradually to prevent surges. Operation is completely automatic and pressure settings maybe easily changed by adjusting screw on top of the pilot.

### Solenoid control valve F8060

Solenoid control valve is an on-off control valve that either opens or closes upon receiving an electrical signal to the solenoid pilot control. This valve consists of a main valve and a two-way solenoid valve that alternately applies pressure to or relieves pressure from the diaphragm chamber of the main valve. It is furnished either normally open (de-energized solenoid to open) or normally closed (energized solenoid to open). Industrial uses for the solenoid control valve are many and include accurate control of process water for batching, mixing, washing, blending or other on-off type uses. Liquid level control can be provided by using a float switch or electrode probe which sends an electrical signal to open or close the valve as needed.

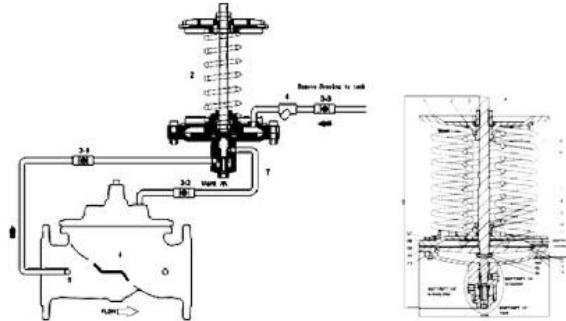

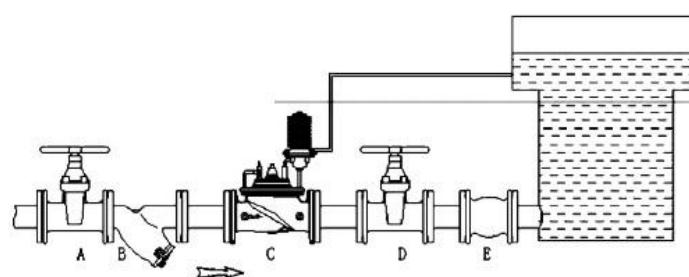

## Hydraulic control valve series

### Altitude control valve

F8015

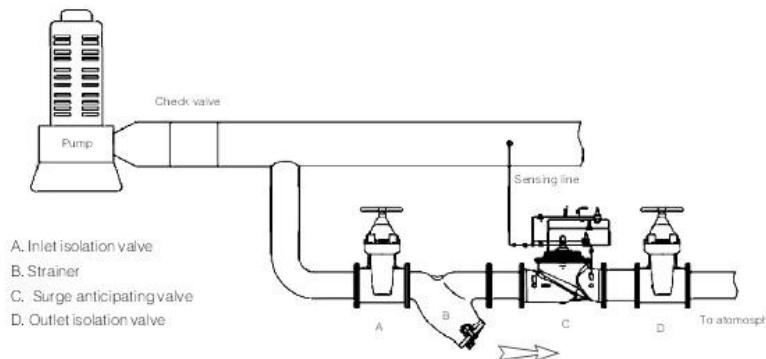

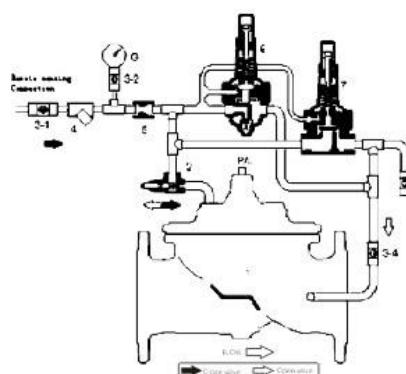

The Altitude valve controls the high water level in reservoirs. Without the need for floats or other devices. It remains fully open until the shut-off level is reached. This valve is designed for one-way flow only. This valve is hydraulically operated and pilot controlled. The pilot control operates on the differential in forces between a spring load and the water level in the reservoir. The desired high water level is set by adjusting the spring force. The pilot control measures the reservoir head through a customer supplied sensing line connected directly to the reservoir.

### Surge anticipating valve

F8055

Surge Anticipator valve is indispensable for protecting pumps, pumping equipment and all applicable pipelines from dangerous pressure surges caused by rapid changes of flow velocity within a pipeline. When a power failure takes place, the abrupt stopping of the pump can cause dangerous surges in the system which could result in severe equipment damage. Power failure to a pump will usually result in a down surge in pressure, followed by an up surge in pressure. The surge control valve opens on the initial low pressure wave, diverting the returning high pressure wave from the system. In effect, the valve has anticipated the returning high pressure wave and is open to dissipate the damage causing surge. The valve will then close slowly without generating any further pressure surge.

## Silent check valve

PN10/16

### Product Standard:

Design: EN 122334, EN1074  
 Flanges: BS EN1092-2, ISO 7005  
 Face to Face: EN558-1  
 Test: BS EN12266

### Technical Specification:

Size: DN50~DN600(2"-14")  
 Pressure: PN10/16  
 Work Temperature: -5°C~85°C  
 Seat Test: 1.1 × PN  
 Shell Test: 1.5 × PN  
 Medium: Clean Water

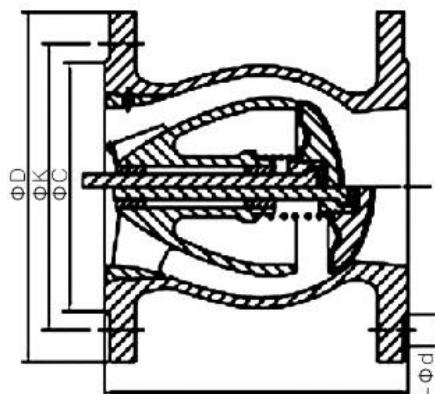

### Features:

- The most reasonable and streamlined design;
- The MIN. Noise while direct flow or back flow;
- Head loss only 0.18bar with velocity of 2m/s;
- Shut off speed is only 0.2s;
- Integral body and flow guide design, full rubber coated disc;
- FBE coating inside and outside Min 250 μ .

### Material Specification:

No.	Part Name	Material
1	Body	EN GJS 500-7
2	Disc	DI+EPDM
3	Stem	AISI 304
4	Spring	AISI 304
5	Bush	Brass
6	Nut	AISI 304

## Foot check valve

PN10/16

### Product Standard:

Desing: EN 122334, EN1074  
 Flanges: BS EN1092-2, ISO 7005  
 Face to Face: EN558-1  
 Test: BS EN12266

### Technical Specification:

Size: DN50~DN600(2"-12")  
 Pressure: PN10/16  
 Work Temperature: -5°C~85°C  
 Seat Test: 1.1 × PN  
 Shell Test: 1.5 × PN  
 Medium: Clean Water, Sewage

### Features:

- Reasonable design, can effectively avoid turbulence;
- Easy to install, maintenance and replacement FBE coating inside and outside Min 250μm;
- It's widely use in pumping stations and networks for clean water distribution, irrigation and water treatment.

### Material Specification:

No.	Part Name	Material
1	Body	EN GJS 500-7
2	Base	EN GJS 500-7

## Swing check valve

## Ball check valves

## Check valve series

DN40-DN300

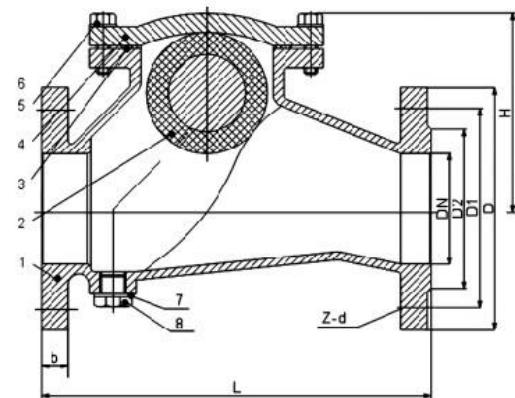

### Application standards

- Face to face: According to DIN 3202-F6
- Flange drilling: According to EN1092PN10-6, ASME B16.1-16.5
- Size scope: DN40-DN300
- Working temperature: 0~80°C
- Working pressure: PN10~16
- Suitable medium: Water
- Coating: Epoxy coating with thickness ≥ 250μm or painting with thickness ≥ 80μm

### Parts list

No.	Part Name	Material
1	Body	Ductile iron
2	Ball Float	NBR / EPDM

### Slow closing check valve

### Flap valve

#### Features and USES

The flap valve is mainly installed at the end of the drainage pipe to prevent the backflow of the outside water. Material is divided into stainless steel, cast iron, steel, composite materials (glass reinforced plastics) and other materials. Clapdoor is a one-way valve installed in the outlet of the drainage pipe along the river. When the water level of the river is higher than the outlet water pipe and the pressure is greater than the pressure inside the pipe, the clapdoor panel will automatically close to prevent the river tide from pouring back into the drainage pipe.

Compared with the traditional gate, batwing gate has the following advantages:

- More energy saving (such as opening and closing doors without external force)
- Long service life (simple mechanical structure, easy maintenance)
- Easy to use (switch does not need manual operation)

## Flap valve

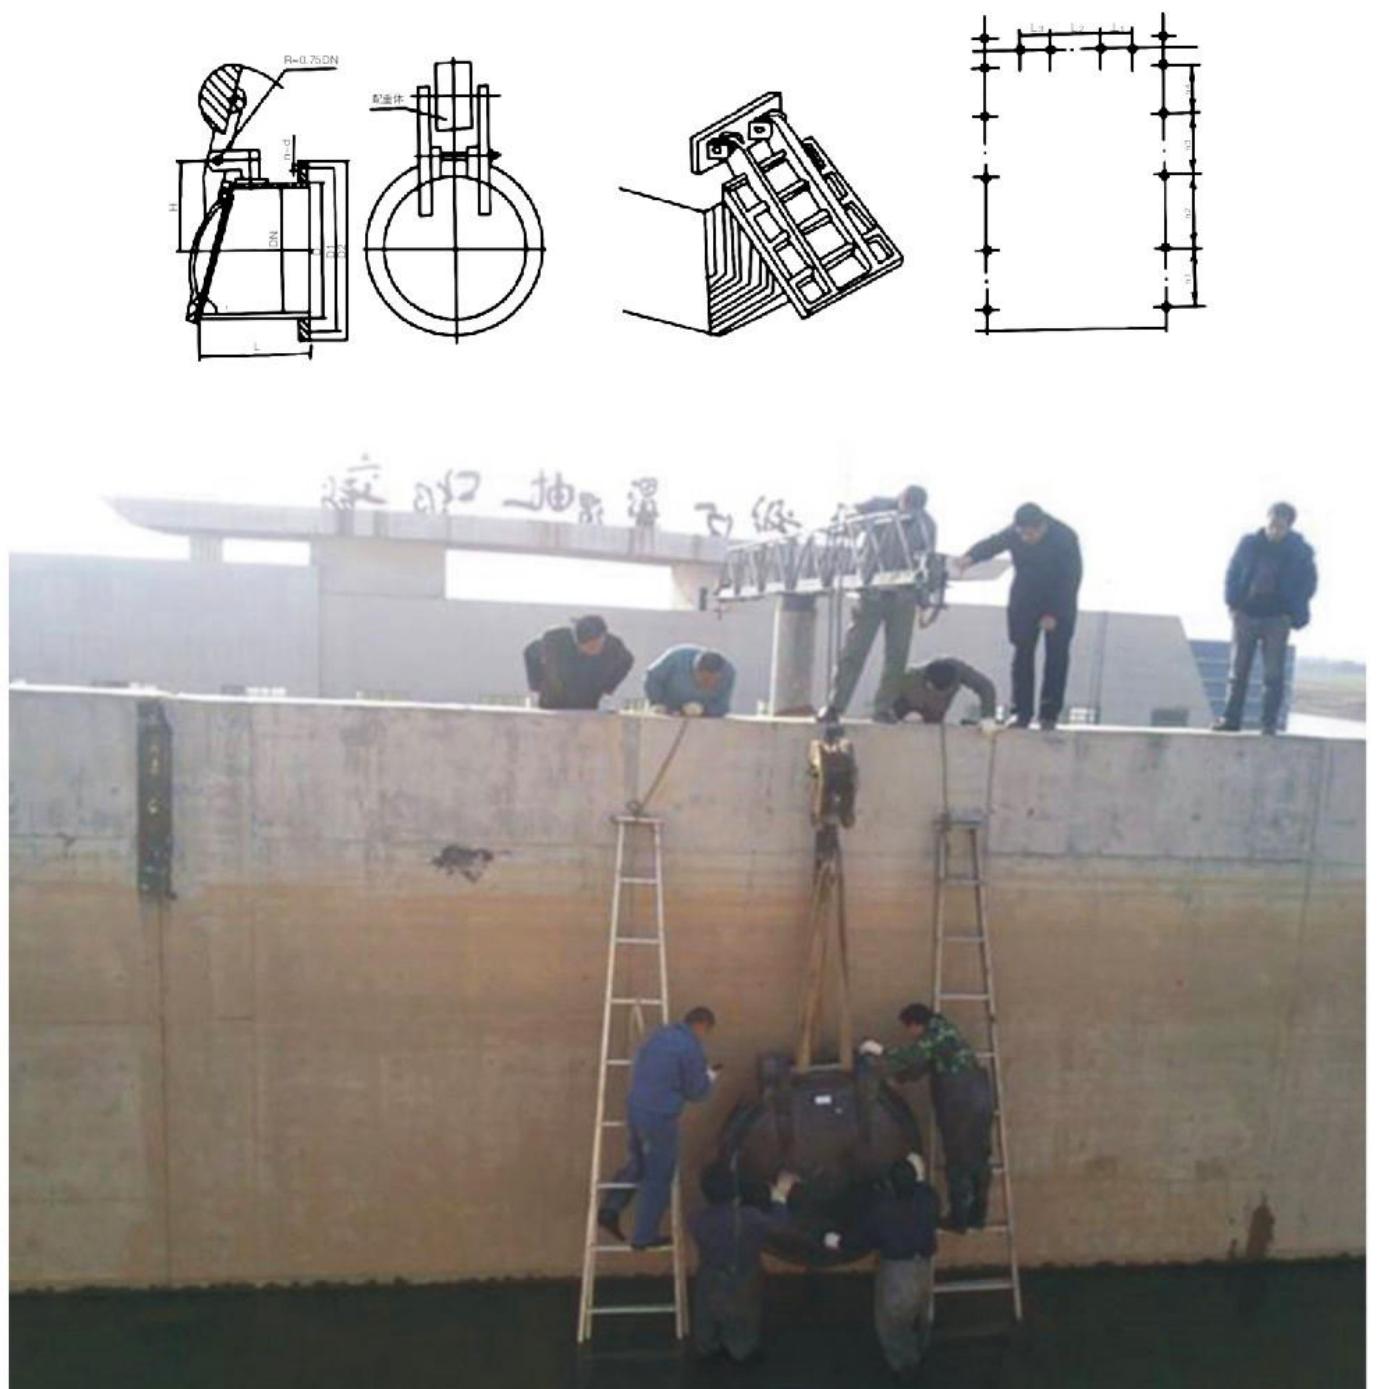

### Working principle:

The valve seat (valve body), valve plate, sealing ring, hinge four parts. It is only used for round and square water outlet of one-way water flow, with strict structure and reliable work, and no need for manual operation of opening and closing force from water source pressure. When the water pressure inside the batwing door is greater than the pressure outside the batwing door, it will be opened. If not, close it.

Applicable medium: water, river water, river water, seawater, domestic and industrial sewage

Scope of application: applicable to water conservancy system, municipal sewage, urban flood control and drainage, sewage treatment plant, waterworks, etc.

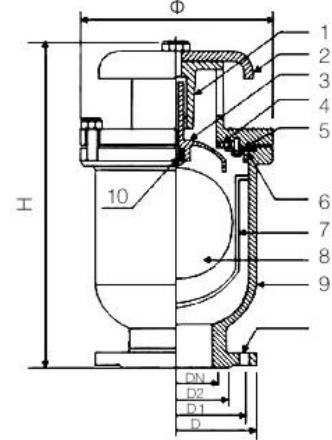

### Installation

### › Air Release Valve Series

- Single flange/thread bleed valve
- Single flange/thread bleed valve
- Double ball air valve, combined air vent valve

## Single flange/thread bleed valve

### Product Overview

This product is used at the highest point on the pipeline or at the outlet of the closed air and pump to remove the gas in the pipeline to dredge the pipeline and make the pipeline work normally. If the exhaust valve is not installed, the pipeline will appear air resistance at any time, so that the water output capacity of the pipeline cannot meet the design requirements. Secondly: the pipeline in the operation of power failure, stop the pump pipeline in time negative pressure will cause vibration or rupture of the pipeline, the exhaust, inlet valve quickly inhaled the air in the pipe, to prevent vibration or rupture of the pipeline.

### Action principle

The compound exhaust valve must be equipped with two holes, one big and one small, the big hole and the diameter hole are basically the same, the pipeline first water has a lot of gas to discharge, these gases are discharged from the big hole. When the gas exhaust, the big hole stop exhaust, pipe in normal operation, the tube will naturally produce negative pressure. A large amount of air is needed in the pipe, and the float ball drops down with the water, opening the small hole and driving the large hole to conduct a large amount of air intake to ensure the safety of the pipe.

Note: the pressure of the exhaust valve should not be less than 0.02mpa in the process of use. If the exhaust valve is prone to water leakage, it must be equipped with a valve for maintenance.

## Air Release Valve Series

## Single flange/thread bleed valve

### Product Overview

Exhaust valves are usually applied on the pipelines of independent heating system, central heating supply system, heating boiler central air-conditioning, floor heating and air heating system. Because there are certain air soluble in water and the air solubility decrease when the temperature rise, then the air separate from water during water cycle, it gradually comes together to form larger bubbles or air column, it usually produce gas for the water supplement.

### Material Specifications

## Double ball air valve, combined air vent valve

### Product Overview

Air valves are applied on the water pipelines as the equipment to exclude the gas in pipelines, it enhances the efficiency of water transport and protect the pipelines from transformation and broke. When the pipeline under negative pressure, this valve will suction air automatically to prevent the pipeline broken. This valve has big gas displacement for double air vents, it owns maintenance valve, close it when repair then it can be on-line overhaul.

### Technical parameters

Using the pressure	1.0MPa
Test pressure	1.5MPa
Applicable medium	Clear water
Suitable temperature	Normal temperature
Body	CI
Floating ball and stopper	Stainless steel

## Strainers & Pipe Fittings

- Y strainers
- Water outlet strainer
- Flange rubber expansion joints
- BS Strainer
- BS750 Underground fire hydrant
- Restrained flange adaptor for HDPE/PVC pipe
- ST strainers
- Hydrant box
- Valve shaft
- Ductile iron pipe joints

### Y strainers

DN50-DN400, 4.5"-12"

### Strainers & Pipe Fittings

#### Material Specification:

No.	Part Name	Material
1	Body	Ductile iron
2	Cover	Ductile iron
3	Gasket	EPDM / NBR
4	Plug	Galvanized steel
5	Screen	SS304
6	Bolts	Galvanized steel

#### Application standards

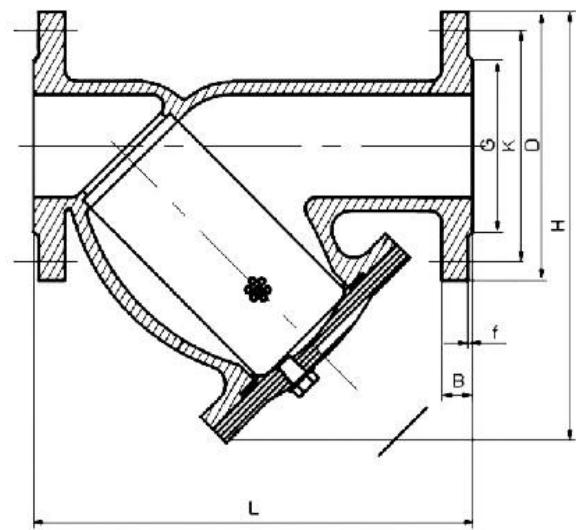

- Face to face: According to DIN3202-F1, BS2080
- Flange drilling: According to EN1092 PN10-16, ASME B 16.1-16.5
- Size scope: DN50-DN400, 1.5"-12"
- Working temperature: 0-80°C
- Working pressure: PN10-16, Class 125-150
- Suitable medium: Water
- Coating: Epoxy coating with thickness ≥250μm

#### Standard for mesh of screen

- For water medium: 10-30 mesh/cm²
- For oil medium: 8-200 mesh/cm²
- For Air/gas medium : 40-100 mesh/cm²

**Function**

Water outlet strainer is an indispensable device on the medium pipeline, usually installed in the pressure relief valve, pressure relief valve, constant water level valve, square filter other equipment inlet equipment. The filter has a certain size of filter mesh filter cylinder, its impurities are blocked, when the need to clean, as long as the removable filter cylinder out, after treatment can be reloaded, therefore, the use and maintenance is very convenient.

Mesh size of filter screen is generally 10~30 mesh /cm<sup>2</sup> for water filter, 40~100 mesh /cm<sup>2</sup> for air filter, and 60~200 mesh /cm<sup>2</sup> for oil filter

**Hydrant box**
**Technical Requirement**

1. BS 5834 Standard (include BS 750)
2. Material: Ductile Iron
3. Words: "FH", not less than 75mm
4. Frame Size: 230 × 380 × 125mm
- Overbase Size: 350 × 500
5. Coating: Black Bitumen

**Valve shaft**

Valve hole is the underground pipeline and underground pipeline, such as water, oil, natural gas pipeline, etc.) of the valve to open and close in the need for part of the network operation or maintenance is convenient, is set similar to the small room of a pit (or well), such as the valve installation in the pit, is advantageous for the periodic inspection, cleaning and dredge pipe, prevent blockage of hub. This pit is called the valve well.

**Technical requirements**

1. The valve well itself can not seepage water, must ensure its tightness;
2. During the use of the water supply pipeline, the pipeline will be subjected to pressure from different aspects, resulting in different degrees of vibration or settlement, that is, the connection between the water supply pipeline and the valve well should be reliable, able to adapt to a certain degree of vibration and settlement, without water infiltration into the well chamber; Cast iron valves (such as globe valve, butterfly valve, etc.) are generally used when the buried deep valve well pipe is a little larger (such as globe valve, butterfly valve, etc.).
3. The connection between the valve well wellbore and the well body and cover should be reliable. Water should not seep into the well chamber because of heavy rain or water.
4. The valve well is buried in the ground, to withstand different pressures from all directions, and different chemical corrosion and damage, and the requirements of its pressure capacity and acid and alkali corrosion resistance.

## Strainers & Pipe Fittings

## Restrained flange adaptor for HDPE/PVC pipe

### Assembly instructions:

For flange adaptors: Bolt the flange to the mating flange first.																																											
Chamfer the pipe use lubricant (See page M 5/2) Do not use oil! 																																											
Push the pipe to the end of the socket. For thinwalled PE-pipes (up to 3mm wall thickness) and low internal pressure we recommend using a support liner																																											
Tighten the lock ring bolts crosswise until lock ring is tight on bushes.																																											
<b>Tensile Testing:</b> The following maximum tensile loads have been established.	<p>*1KN=100kp</p> <table border="1"> <thead> <tr> <th>Pipe <math>\Phi A</math> mm</th> <th>Theoretical tensile load-(kN*) at 10bar internal pressure</th> <th>Max. ### Universal triple repair clamp

Use:

Connections and repair pipes made of various materials.

Materials:

1. -Body –ductile cast iron protected with epoxy powder coating.
2. -Gasket –EPDM or NBR rubber.

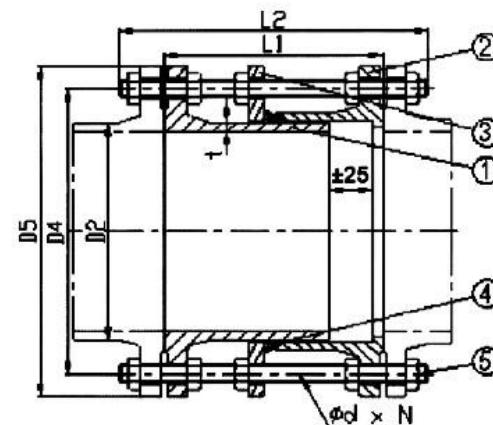

Art. No.: WD4810

Cast Iron Flange Saddle Clamp

Saddle with flange outlet for DI/PVC/PE pipe

Material: GGG450-10

Coating: FBE/Painting

Size: DE63-315

Pressure: PN10/PN16

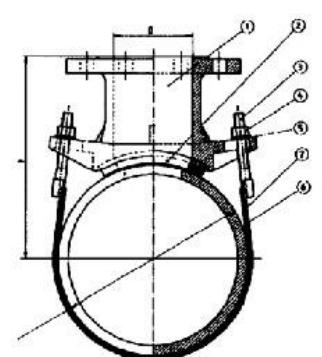

Quick saddle for PVC pipes

## Ductile iron pipe joints

BSEN545/ISO2531

- Ductile iron GGG-40 epoxy coated outlet flange.
- EPDM gasket according to UNE EN 681/1.
- Mechanical insertion of the gasket in order to guarantee major watertightness.
